in 4 systems, and nobody

What that costs

- **Renewals at risk.** Two account teams pitch the same CFO without knowing it.
- **Cross-sell missed.** Harbor & Cole clients never see Northbridge

specialty lines.

- **Revenue leaks.** Carrier statements cannot be matched to the client who was billed.
- **Compliance exposure.** Defence & government clients copied into every system and spreadsheet.
- **Integration stalls.** "Wait for the CRM migration" is a two-year answer.

n, and how this moves it

DOMAIN OWNER · HEAD OF CLIENT DATA & GOVERNANCE

- Duplicate rate and time-to-resolve, with 51 reviews instead of 3,661
- Steward throughput with an AI second opinion on every hard case

- Restricted-client access enforced by policy, provably
- Lineage from every number back to the source record

per client, the number both of them report.

“Names are identical after normalising case and

suffix (S.R.L.=Srl); same country (IT). No conflicting registration (A has none). Differing addresses consistent with branch/legacy systems.”

RECOMMENDATION: MERGE · THE STEWARD DECIDES

hose not to do

	TRADE-OFF
	Sources stay messy; we standardise downstream
udgement	Needs labelled history to start (stewards supply it)

	Relies on tagging discipline
ables; data	Restricted views query the warehouse (~3 s, not ms)
	Minutes, not seconds, to refresh; move to continuous at scale

han owned every decision

WHERE IT MULTIPLIED

- **Probe before design:** five platform limits found in the workspace before code depended on them
- **Ground truth from day one:** labels caught a party-id collision (830 false merges to 0)

- **Prompts tuned on evidence:** the steward prompt went from 91% "needs info" to decisive v2
- **Adversarial review:** 10 real defects found, fixed, re-verified
- **Evidence as code:** every number on these slides is a live query

sures, Northbridge's people make the calls.

lient, and a worked value case on

TECHNICAL

- **Scale.** Blocking keeps comparisons near-linear; featurisation moves to Spark UDFs beyond ~1M records.
- **Integration.** Lakeflow Connect for Salesforce / SQL Server;

the golden record syncs back to operational systems.

- **Security.** ABAC, on-behalf-of-user app and Genie access, service principal reads gold only.

g build, not promised.

Real vs synthetic

Every pipeline, model, policy, synced table, Genie space and the app is real and running. All companies, people, registration numbers, carriers and amounts are generated (fixed seed). Training labels stand in for a steward-labelled match history. No customer data.
